

Events in France offer a typical example of what Marxism means for working people, socialisms tame achievements have crumbled here. Industrial unrest, with the poverty it brings with it, and clashes with authority are the net result of years of struggle and democratic methods for better conditions.

Let British working men and women take a lesson by these events. Democracy and all its methods leads to a cul-de-sac where the workers find themselves up against a wall of batons, if not bayonets.

In the modern age, only one method of revolution can succeed. That method demands a change of heart, and a realisation that the workers will never secure revolution in Britains interests until they abandon the delusion that well paid trade unionist leaders will get them anywhere, and until they take the job on themselves in discipline and patriotism. democracy points the way to futility, strife and poverty for the working people. British Fascism points out the road that leads to national revolution and through it to the triumph of unity, which can only give the workers strength to end the misery among our fellow men.

Democracy has failed, Marxism has failed, embrace Fascism and help build our future.
